

ALUMINIUM CNC

Lasting Quality - A process guarantee that the raw material in all aluminum parts retains its purity and integrity, even to an atomic level.

Scientific tests and studies have proven the far superior strength of components manufactured with **CNC Machining** as opposed to the traditional molding process.

CNC machining aligns the aluminum unidirectionally, ensuring it remains 100% compact, and thus much more resistant to **impact, fatigue and corrosion.**

ALUMINIUM INJECTION

ROCKWELL HARDNESS TEST

INJECTION AL 40 - 50 HRB

MACHINED AL CNC 81 HRB

Procedure: The Rockwell test determines the hardness by measuring the depth of penetration of an indenter under a large load compared to the penetration made by a pre-load. In these tests it was proven that the CNC component is twice as resistant as the injection molded part.

A BRAND NEW **GENERATION** AWNINGS & PERGOLAS

by **nevaluz**

SAHARA  **DAKELVERTICAL**

NEW GENERATION AWNINGS

The **Dakel Vertical** awning has been designed to protect from the sun, regulating the exterior light and temperature.

It is manufactured with **CNC Technology**, guaranteeing its excellence and durability with the highest resistance classification of the market, Class 3 according to the **UNE EN 13561** standard.

It has an integrated and minimalist design, with multiple options and finishes, which allows it to easily adapt to different architectural styles.

COMPONENTS MACHINED ALUMINIUM

Due to CNC Machining, the resistance and quality of the components provide a level of structural strength that is unique in the industry, combined with the appeal of an integrated minimalist design.

VERSATILITY TO INSTALL

The supports allow the Dakel Vertical awning to be installed in a gap, wall or ceiling.

RESISTANCE

High strength parts, its cable system makes it more wind resistant.

EXCLUSIVE DESIGN

The aesthetics of the Dakel awning is symmetrical and up-to-date, it is designed with attractive upper and lower supports.
